

ReadMe file for “*Farmer Field Days and Demonstrator Selection for Increasing Technology Adoption*”

Authors: Kyle Emerick and Manzoor H. Dar

Email kyle.emerick@tufts.edu with questions

Data Files (Stata 15 format):

1. seedsales.dta: Farmer-level dataset on seed adoption from door-to-door sales in 2015. The dataset also includes some of the variables from year1infosurvey.dta as covariates. The datasets can be matched with the variable “unique_id”.
2. year1infosurvey.dta: Data from the February/March 2015 information survey with the main estimation sample.
3. demonstrators_characteristics.dta: Dataset from the survey of demonstrators in 2014. Each row is for a separate demonstrator and the variables are mostly household and farm characteristics for each demonstrator.
4. adoption_census.dta: Dataset from census on rice variety adoption in 2015. The variable unique_id is populated if the household was matched to the other datasets.
5. demonstrators_attendance.dta: Village-level dataset with the number of demonstrators that attended the field days.

Do Files:

1. “replication analysis.do”: This single do file runs all the regressions and generates the figures in both the main text and the online appendix. The directory at the top of the do file should be set to the location of the 5 replication datasets. The global “latex” at the top of the code denotes the folder where all figures and tables will be saved when the code is run. The code for each figure/table is clearly labeled to match its number in the published paper. For instance, search the do file for “Table 1” to locate the code that creates Table 1 in the paper.

Data Dictionaries:

Each variable in the above datasets has a label so that it can be easily understood. The categorical variables all have value labels so that their numeric values can be understood. The data dictionaries are pasted below

seedsales.dta

row	variable	type	format	description
1	farmer_id	int	%8.0g	ID number of farmer
2	village_id	double	%8.0g	ID number of village
3	unique_id	float	%9.0g	Unique farmer identifier
4	group	str5	%9s	Selection treatment assignment
5	census_tahsil	str15	%15s	Block (from Indian census)
6	purchase_kg	byte	%10.0g	Amount purchased (kg)
7	buy	float	%9.0g	Bought at door-to-door
